Class Manual 1

ERD

An ERD (Entity Relationship Diagram) is used to represent the logical structure of a database. It consists of entities, attributes, and relationships.

Entity: A real-world object (e.g., Student, Course)

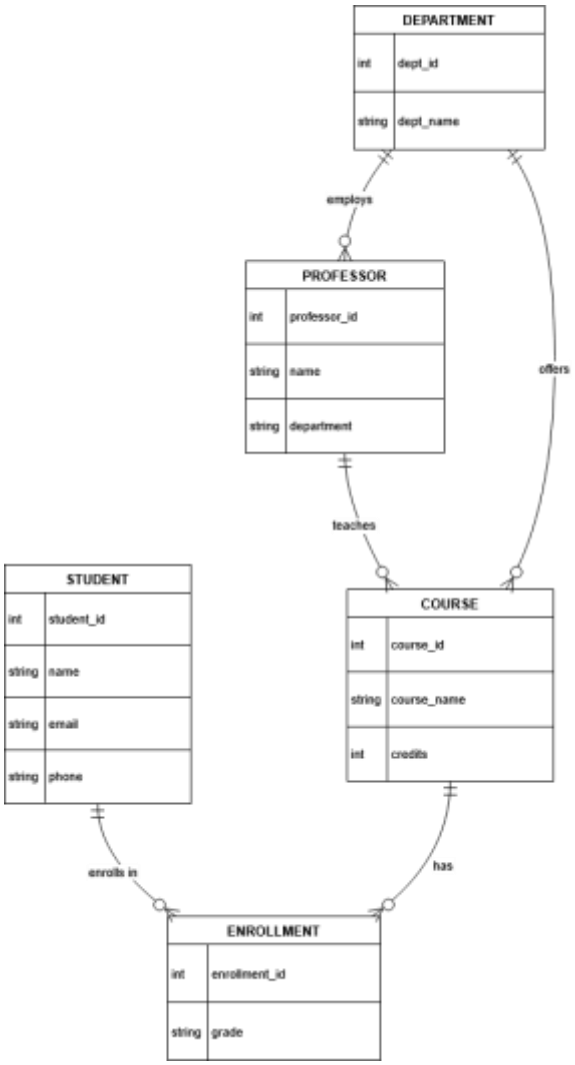

Attribute: Properties of entities (e.g., Name, ID)

Primary Key: Unique identifier for an entity

Relationship: Association between entities

Cardinality: Defines the number of relationships (1:1, 1:N, M:N)

University System ERD

Library System ERD
